Stellar

# Brand Manual

2025

# Brand *background*

A *design* **update for Stellar.**

*SDF is currently busy growing its relevance in the world. Partially coasting on the increasing adoption of blockchain technology, partially because of its own notable merits. Look left or right; we see other blockchain "brands" getting traction.*

**Some in the business world, some in the mainstream, others in the underground. But they all seem to look, speak and behave similarly. Their success seems to be more related to the Zeitgeist and not so much strategy.**

**Stellar** is in essence different from all the other players. We know it. We believe it. But we don't quite show it. The time has come to show who we truly are. ***Show and lean in to our true potential. Appreciate ourselves.***

***Ikigai*** has given us clear handles for what that unique identity can be. Now we have to bring it home with a design update. ***One that shows our strength and our sensibility. Our nimbleness and our stability.***

We need to whistle at traditional banking and policymakers and the young *internet* entrepreneur, all the while invoking implicit trust in both. **Let's go!**

# 01 Design Ethos

# Design Ethos

## *Language* **Ethos**

*Imagine a huge festival. Crowded. Now imagine the first aid stand. The people there are not partying. But they are intensely interacting with the party. They are alert. Vigilantly engaged.*

**They are humble and serviceable, but are they invisible?** If you are in need, you need to find them quickly. Signage points at them from the other side of the grounds. They will have flashy colors and are positioned on higher ground. How much help are you if you are not visible to those in need.

*Helpful design is* ***humble, not invisible.***

# Find *your way*

*We speak to very different people, and our brand world needs to show the way. That, in combination with having so many different humans that need our tech in so many different ways, give us a hint about how helpful design comes to live.*

**Go left if you are an innovator, right if you are a bank. Let me take you by the hand if you are willing to learn about code, entrepreneurship, financial services or even aid. How can we help you build?**

# 02 Brand Logo

# Brand logos

We have adjusted these **2 *logos*** to always include the Stellar Monogram.

***Download*** Logos

# Construction and clear space

**When placing other elements near the logo, use X as a metric for determining space allowance. X is equal to a ⅓ of the height of the Stellar monogram. This also determines the distance between the monogram and the word mark.**

The sublogos contain multiple lines. The space between the words is ½ x.

½ x is also the space that is above and below the wordmark ***Stellar*** relative to the monogram.

# 03 Typo-graphy

## Headlines brand

*Our new headline font; Lora*

*Default font for most communications.*

# Professional, elegant, enterprise-friendly Lora

## Headlines brand

*Lora is available in Google Slides,*

# Professional, elegant, enterprise-friendly Lora

# Fonts

**Lora** is used for longer headlines and subhead, also it can be used for body copy.

Lora

**Inter** is used for captions, body copy, or other detailed uses only.

Inter

***Download*** Fonts

# Accent Fonts

*Use sparingly to maintain impact.*

*Our typeface for accent fonts comes in two styles;* ***Schabo*** *and* ***Anton****. This allows us to flex our voice across a wide range of applications, keeping a distinct and consistent impression.*

**Schabo** is used for call outs.

SCHABO

**Anton** is used for Google slides or other applications where Schabo is not possible.

ANTON

***Download*** Fonts

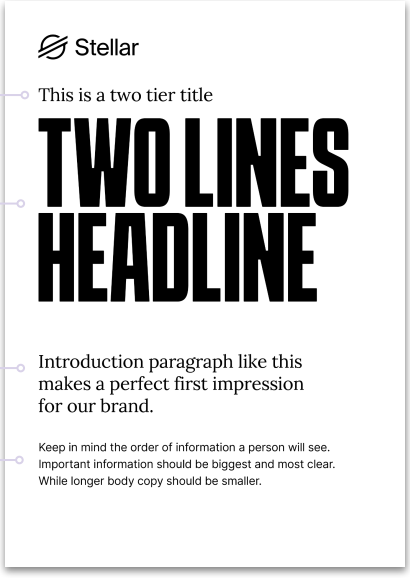
# Main font types

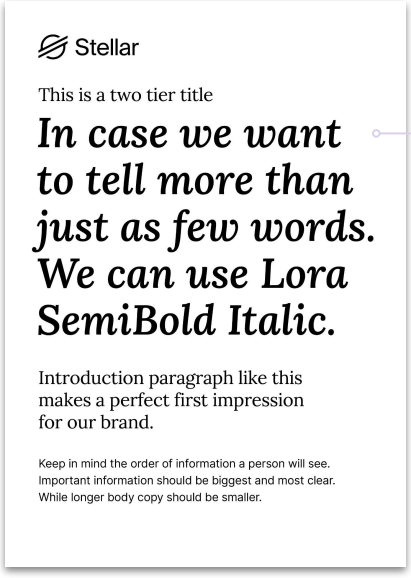
*We start with a title that explains in full "technical correctness" what we are here for in* ***Lora****.*

***Schabo Condensed*** *is used for headlines and is set in ALL CAPS, Here we use more playful and human centric language.*

***Lora*** *is used for longer headlines and sub-heads.*

***Inter*** *is used for captions, body copy, or other detailed uses.*



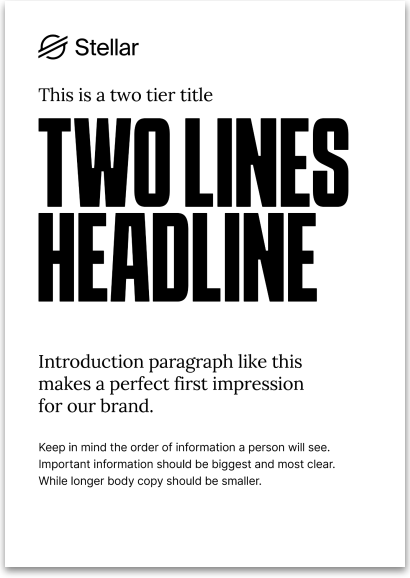


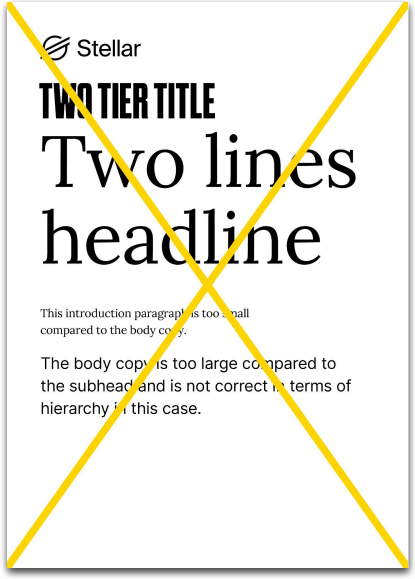
***Lora***
*SemiBold*
*Italic*

# Scale

*Size scale and placement all play a factor in how copy is understood.*

We are trying to create a funnel of information. From large to small. Large is for everyone, and as we go deeper into the rabbit hole, our communication is smaller and more towards the intended niche target.





# Readability For Accent Fonts

*Schabo is used for headlines. The style of writing is playful and creative. Ask your local copywriter to help out :)*

Do not use this font when your message is too long. Please use ***Lora*** to tell your story better.

*Too long of a headline.*

*Just right*

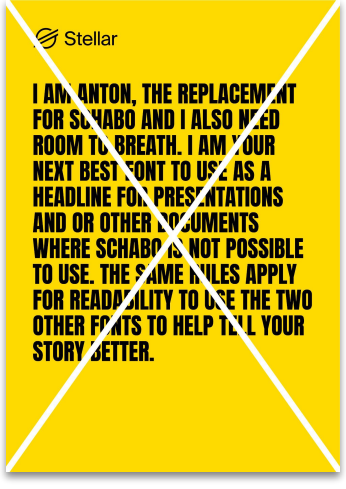
*Just right*

# Readability For Accent Fonts

*Anton is used for headlines in e.g. Google slides or other applications when Schabo is not possible. The same rule applies to make sure to find the right words to get our message across.*

Do not use this font when your message is to long. Please use ***Lora*** to tell your story better.

*Too long of a headline.*



*Just right*

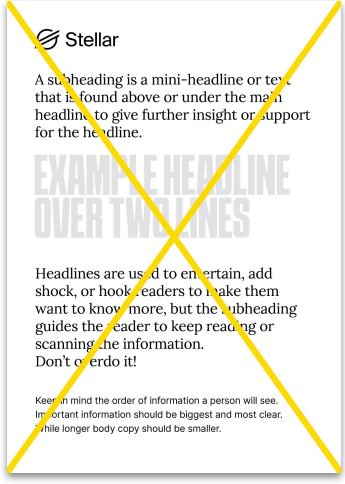
*Just right*

# Readability subheads

*Lora is used for subheads, two tier title and introduction text.*

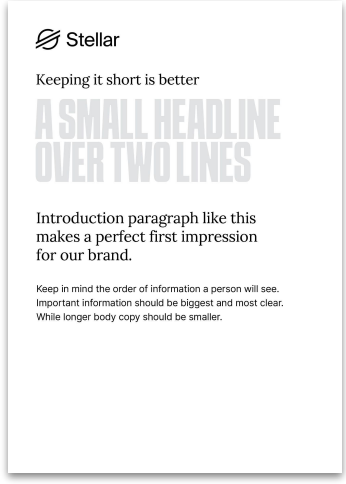
*It also makes a great body copy font, especially when your deliverable is for print.*

*Too long of a subhead or two tier title.*



*Just right*

*Just right*

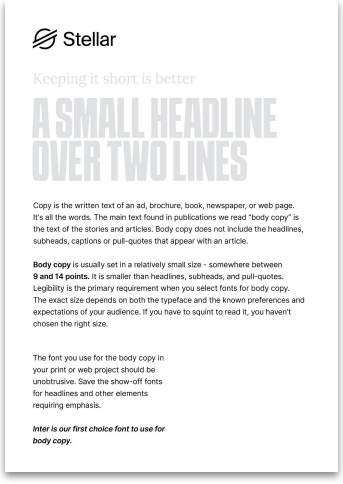


# Readability body copy

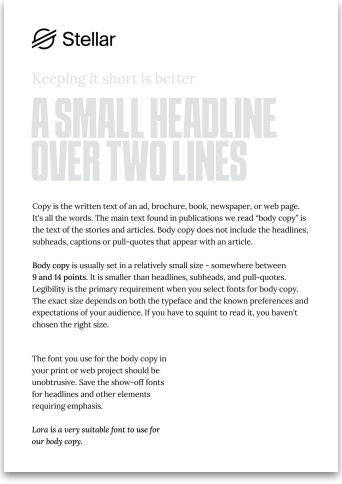
*In the digital space, we see Inter as our main content copy. Lora plays second fiddle. In the physical world we inverse this. Lora becomes our protagonist, while Inter is used for detailing. There is just something trust inducing in seeing a serif font, printed on paper.*

Body copy is usually set in a relatively small size, somewhere between ***9 and 14 points***. It is smaller than headlines, subheads, and pull-quotes. Legibility is the primary requirement when you select fonts for body copy. The exact size depends on both the typeface and the known preferences and expectations of your audience.

Inter



Lora



# 04 Color Palette

# Color hierarchy

*Generous Gold is our brand color.*
*White is our foundation.*

Our secondary colors are **Lilac**; it connects us with our DEFI roots and our own legacy identity. **Teal**; a perfect contrast to our *Generous Gold* brand color. **Warm Grey** is a warm alternative to white, and can be used for content one needs to draw special attention to. Same goes for our **Navy Blue**, a color that underlines we are the adult in the room.

# Primary color palette

## GENEROUS GOLD

***Online***
RGB 253 / 218 / 36
HEX # FDDA24

# 06 Photo-graphy

## 10 easy steps

### *Photography becomes very important in our communication.*

Our photography should feature humans. But not any picture can do. So what does constitute a Stellar worthy image?

# Here are 10 easy steps →

# 01

***The Stellar Ecosystem is a global ecosystem.*** Our photography shows the whole world. Let's try to visualize the 175 countries we are active in (one project at a time). Let's be the brand that puts the never seen before in the limelight.

# 02

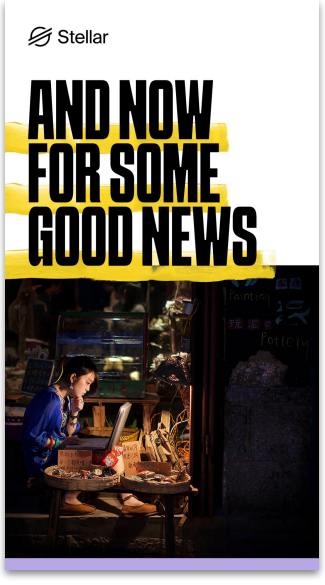
***Let's un-stereotype the world's middle class.*** If we want our ecosystem to see the potential in untapped or underserved markets, we need to get rid of the image that everyone outside the *developed* world is poor and has no potential for business success. The more we show human potential at work, the more our world will become sensitized to see it for what is truly is: A *universe of opportunities.*

# 03

***Developers are from anywhere. There is no single "way" developers look.*** Some wear a suit, others a Jurassic Park tee. Not just men, not only in an office, not just sitting behind a computer minding perfect ergonomics. Force yourself with every photo to broaden the image of a creator, entrepreneur or innovator.

# Examples

Stellar
TIME FOR SOME GOOD NEWS



Stellar
AND NOW FOR SOME GOOD NEWS

Stellar
This is a two tier title
GOOD NEWS

# 04

***We are the real-world blockchain.***
We show human potential, so we don't need to dwell in *our* potential. So no need to *visualize* the future. ***Let's show what we are doing today!***

# 05

***But...when we say, let's show what we are doing, let's not take that too literally!***
What we are doing today is not just computer related. Let's try to balance the amount of digital devices we see. When we do, let's assure we find an interesting twist.

# 06

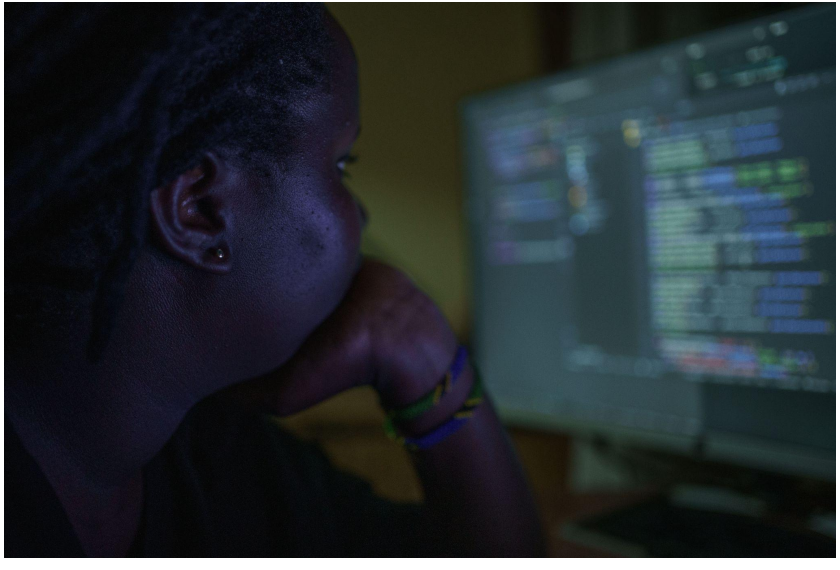
***Let's explore who uses Stellar, with an open mind.*** You can't see whose lifeline are remittances, or who just got paid in USDC. Try to imagine a backstory with a real use case... No need to shoehorn it too much, if it doesn't come naturally, delete, move on.

# 07

***If there is a bit of humor or absurdity in the image.*** That will keep everything we do lighthearted and uplifting. Remember reality is stranger than fiction.

# 08

***Let's see people that thrive, not just survive.*** The Stellar world is a hopeful world.



# 09

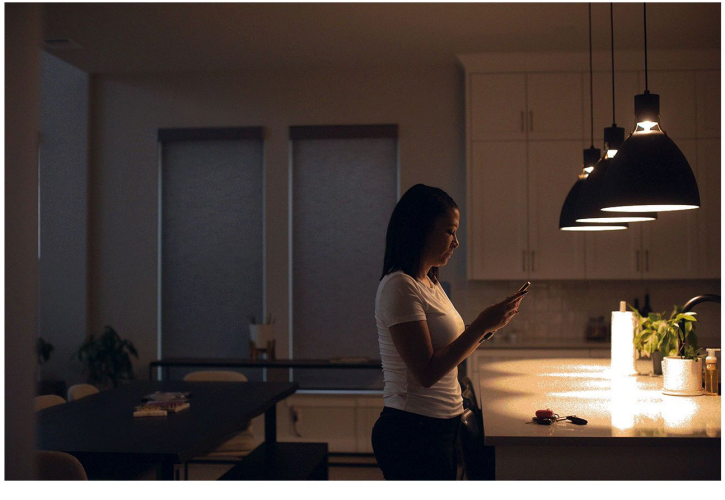
***Distance is our enemy.*** Make sure the photos are taken in the middle of the action. Not from a driving car, or a far away location.

# 10

***Let's start loving imperfections.*** No need to obsess over over focus, motion-blur. Remember, the technically correct is not the only type of correct. Make sure the image makes you feel something. We are picking a moment, not a JPEG.

# Our Developer photos

Next to showing the world as a universe of opportunities, we should always use photos to show our great developer community.
**What their worlds look like, what makes them tick, what makes them unique, what problem, from what world they are solving.**

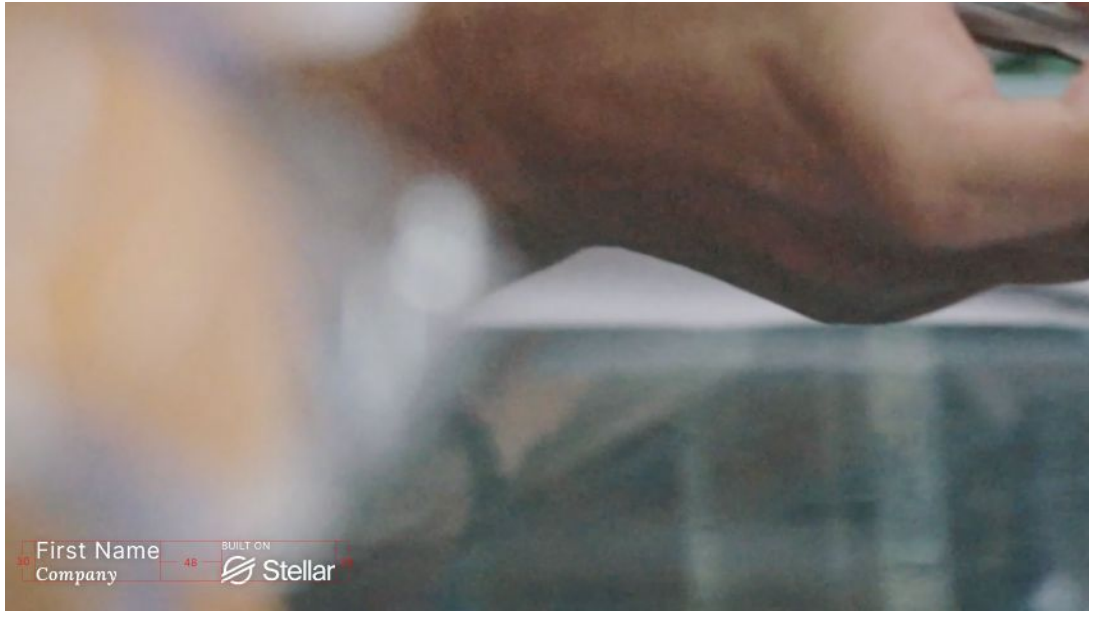


***Download*** Photography

# Photo Tag Guidelines

- Tag is placed on lower left corner.
- First Name and company line will be flush left.
- “BUILT ON STELLAR” will be flush right with the logo.
- There is a drop shadow behind the text.
- All text and logo will be #ffffff

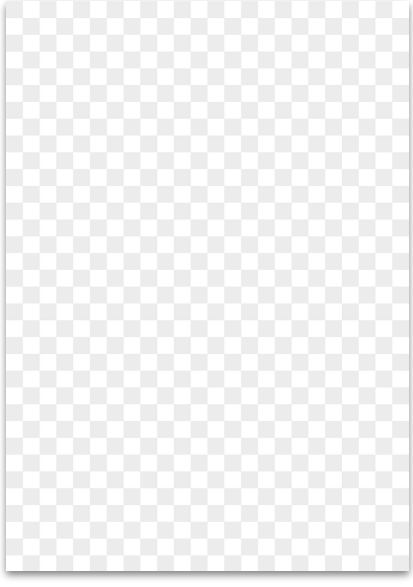
**First Name:** Inter 18pt, regular
**Company:** ***Lora 14pt, semibold Italic***
**Drop Shadow:** Blur 8, #000000, 40% opacity
**Line Height:** 30px
**Space between:** 48px



# 07 Layout

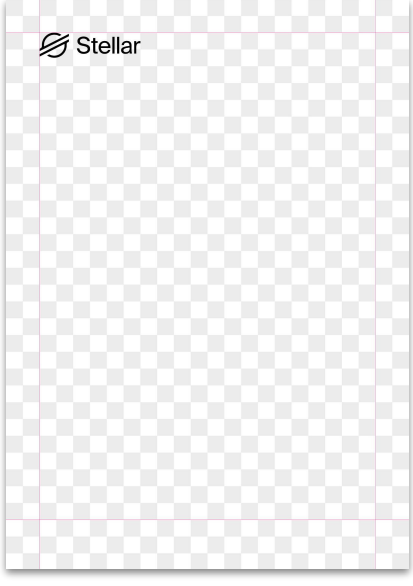
# From start ...

*Use a 24 columns grid.*
*On this grid every element*
*will be placed.*



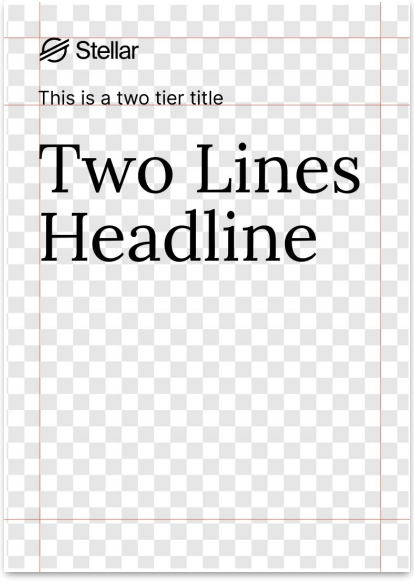
# From start ...

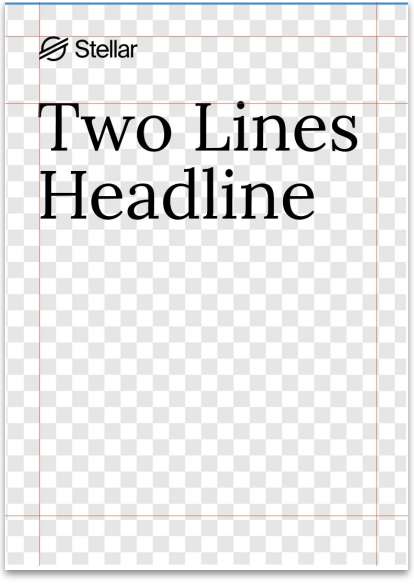
*Place the logo first.*
*Align the logo on the second column from the left. The top of the monogram aligns on the second row.*



## From start ...

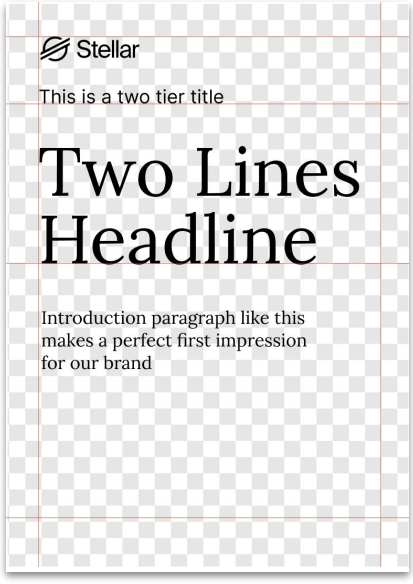
*The placement of the Stellar logo determines the alignment of our headline. This headline can exist as a single or as a two tier headline.*

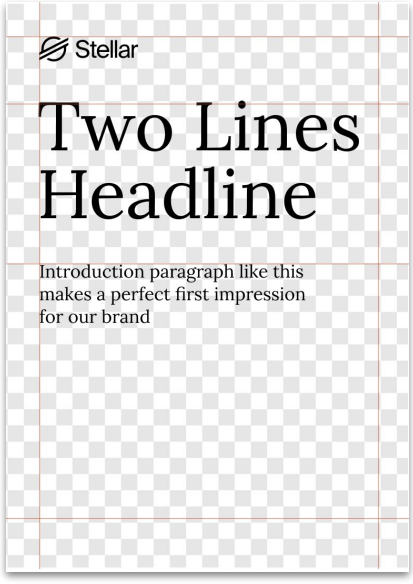




## From start ...

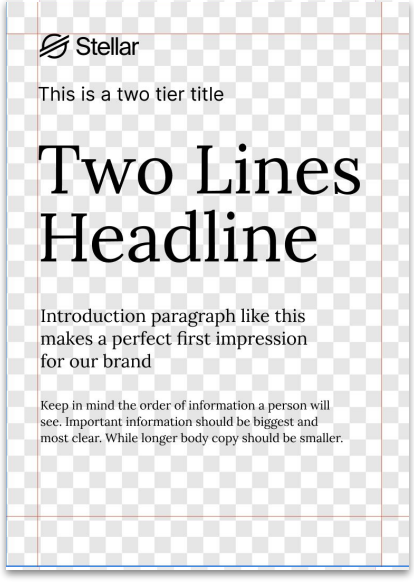
*Introduction text will align with the headline and is placed in Lora.*

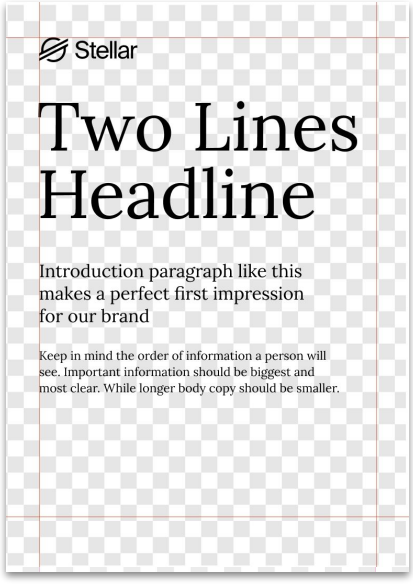




# From start ...

*Body copy is placed using the Inter font and will be smaller in size than our introduction text.*





# From start ...

*Placing the highlight is always underlining the...*

A color of our secondary palette is added. In this example “lilac”

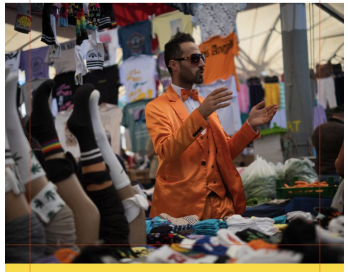
# A Small Headline Over Two Lines

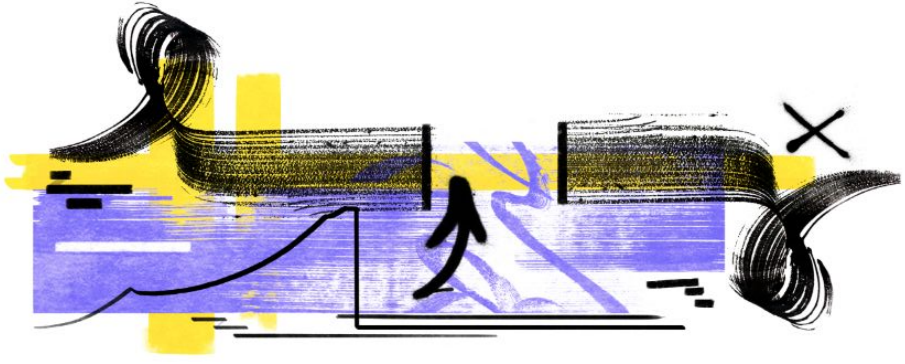


# 08 Illustration style

# Introduction

*Previously, our brand leaned heavily on only graphics and diagrams as a means to convey visual information.*

Today, we can distribute the weight of our story between more visual elements. That also means that when we lean on illustration for informative or storytelling purposes, we need to be mindful of how we use it.



# Moodboard

# Street Style

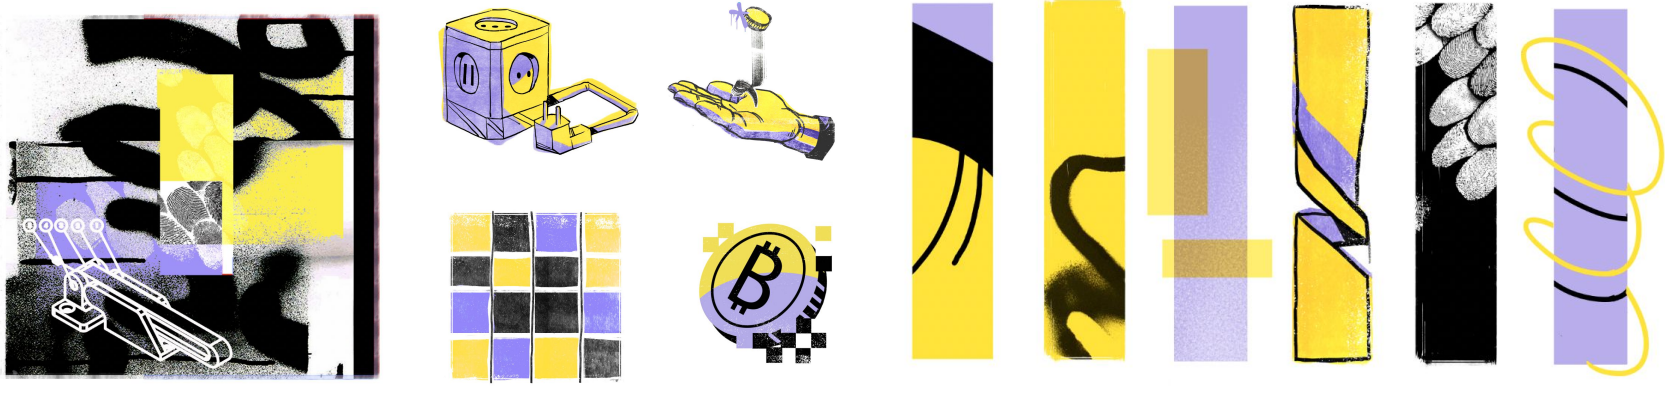
*Looks like it's made with real materials and enhanced digitally.*

***Colors***
Lilac, black, generous Gold.

***Painting style***
Visuals consist of textures and forms that create one coherent visual. Graphic and textured parts that are layered on top of each other. Big forms in the back, smaller middle, chunky line art in front.

***Other features***
Layering of different parts. Construction of textures that run through each other. Parts melt together. The textures are part of the different elements inside the visual. Use arrows to point at important information.

# Element exploration



# Build up iconography

**01.** ***Draw*** chunky line art

**02.** ***Add color*** lilac is always shadow

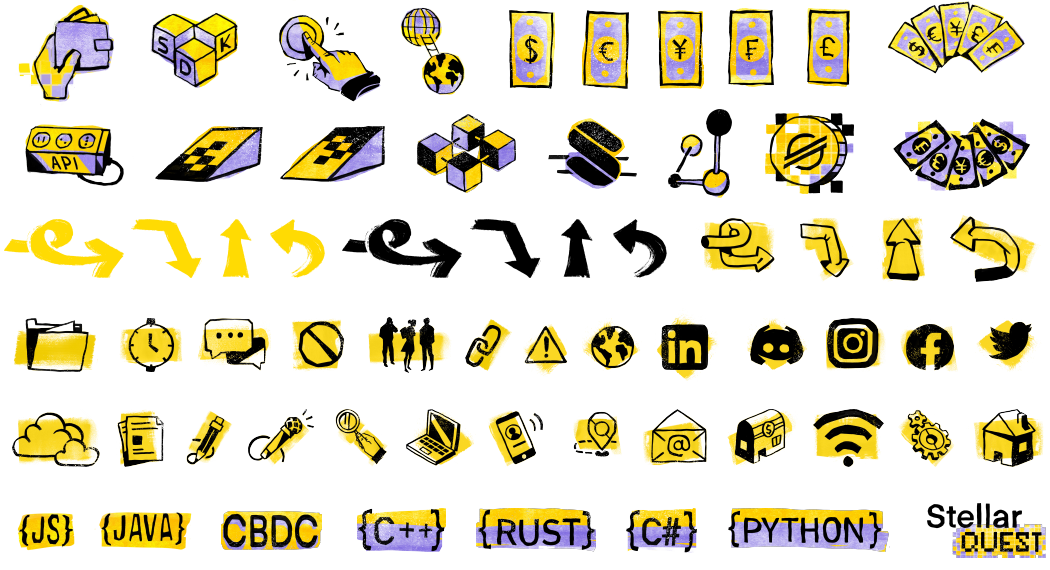
**03.** ***Add texture***

# Icon examples

## *Rules for iconography*

- Be literal.
- Leverage conventions.
- Tell a tiny story
- Differentiate between the “traditional” and it’s digital equivalent by pixelating the object.
- Look at your illustration from far away.
- Ask your granny what she sees in it.

**Download** Iconography



# Build up illustration

**01.** ***Draw*** chunky line art

**02.** ***Add color*** lilac is always shadow

**03.** ***Add texture***

# Illustration examples

## *Rules for illustration*

- When you can compress a paragraph of text into one image.
- If you feel you are writing “visual language” or you are about to write **“*Imagine:...*”** This is where an illustration is needed.
- If the concept can’t be covered by a photo, or is not better covered by words.
- If you need an ornamental piece, it’s preferable to insert a photo.
  An (abstract) illustration, is often injected with meaning by the user,
  and can therefore be confusing.

**Download** Illustrations

# Narrative Rules

*Before you brief or create an illustration ask yourself the following questions..*

**01.** ***What do I need*** *this illustration to convey?*

**02.** ***Is this the best visual method*** *to convey the message?*

**03.** ***Can I illustrate the concept*** *without a visual metaphor?*

**04.** ***If I need a visual metaphor,*** *can I stick to one metaphorical concept for the whole image / story?*

**05.** ***Is the chosen metaphor native*** *to our target audience?*

**06.** ***Is the metaphor causing cognitive dissonance?***

**07.** ***Does this image give additional information,*** *or is the idea accessed faster with this image?*

# Visual rules

## Think

*Street Art, mixed media, analogue feel, chunky forms* and *line art, straightforward, cool* and *raw. Fun* and *loose but mature. Messy* but not *sloppy*. ***Not cartoony.***

***Would you paste this as a sticker on your laptop?***

## Do

- Only contains ***generous Gold, Lilac and black.***
- Organic black line art ***(see lino cut for reference)***
- Generous Gold often represents a ***"highlight"***
- Lilac is often represents ***"shadows"***
- Analogue feel and touch: ***looks like it is drawn by hand.***

# Steps to success

*Follow these **steps** for ultimate success*

### *What does it **say**?*

***Artwork should convey the core of what's it about. But*** it doesn't have to be 100% correct. It can be an artistic interpretation. Stay straightforward. Think of at least one keyword and literally use it in the visual.

### ***Lines first**, then color!*

***The readability of the illustration mostly resides in the black line work.*** Before filling in the illustration with color, first make sure the line work is strong and readable on its own. Then you can experiment with discarding certain elements or replace them with other components.

### ***Borrow ideas** from any art style.*

***To further strengthen the message and mixed media feel of the illustration***, give certain key elements an extra visual punch or original visual effect.

### ***Make it sexy** with textures!*

***When you are happy with your visual, make it sexy by adding additional textures for that analog feel.*** You can also try to obscure and melt different elements together in this stage. See how messy you can get! (before you start interfering with the information, that's where you stop).

# 09 Motion Graphics

# Highlights

*This is how highlights behave.*

# Transition

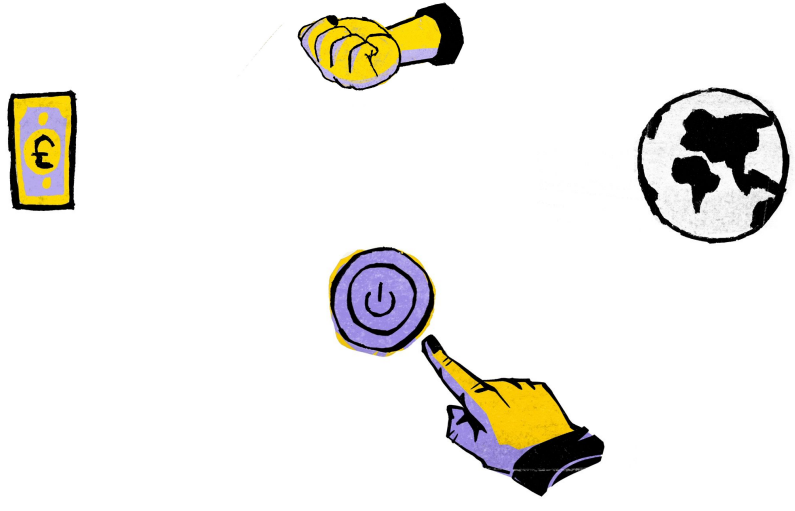
*Street art, stencil art, sticker art, collage art, raw materials and textures, hand drawn painting, spray paint, rough brushes and other mixed media all come to life in our illustrations as we transition into it or out of it.*

# Upgrade to Animation

## *When do we upgrade to animation?*

- Sometimes we need to tell a better story than an icon on it's own can convey, then we can leverage animation.
- This animation should only be done if the animation actually adds to the information

**Download** Motion graphics



# General Motion guidelines

*The motion of Stellar's artwork should complement the illustration style, that is heavily inspired by street art, stencil art, sticker art, collage art, raw materials and textures, hand drawn painting, spray paint and other rough brushes. The combination of these elements together, makes the style. This gives a lot of opportunity and room for creativity.*

**Jittery linework**
Stellar's illustrations should always feel alive, therefore linework should always move, by using small elements of hand-drawn or cel animation. Or when creating a still composition, the illustration should be drawn multiple times and placed in a sequence to give the linework a jittery feel.

**Cel animation elements**
You may add small random cel / frame-by-frame animation elements, like lines that wiggle around or other abstract elements to add liveliness and a touch of imperfection to the artwork.

**Looping Textures**
Use a range of textures like grunge, metal, dirt, concrete, dust and more and place them in a sequence to add a jittery feel to the artwork, both in the line work, blacks, and color fills. Texture can be applied in multiple ways, depending on the illustration or animation, but should never feel like a solid vector color and always like a raw textured material.

**Frame-Rate**
All animations are made on 3's, in 24 fps. This means that each 3 frames are always duplicates of each other, gives the whole animation a more authentic and hand-drawn feel.

# 10 Digital

# Digital

*This will lead to the website design manual*

# 11 Tone of Voice

# What is the Stellar way of writing?

*Just like our visual identity takes notes from the Stellar Helpful Ethos so can our own copy. So what constitutes a language that cultivates human potential, and is helpful?*

Well firstly, let's be thankful and appreciative of any human reading our texts. Let's be mindful that reading our texts is NOT their main activity.
Let's keep our texts pragmatic.

Let's make sure we are aware of the medium they are written in, and what state of mind our readers will most likely be in.

***If the text is too long, provide a.***
***No conclusions at the end. But at the beginning.***
***Now that is The Stellar Way.***

# Tone of voice TL;DR

*Let's be mindful of our audience's time, patience and knowledge level. One great way is to provide information quickly. Don't wait till the end of a piece to give a conclusion. Let's lead with that. Let's always start with a TL;DR. I*

Introducing this **TL;DR** tactic gives our readers the sense that we relate to their needs. We relate to their need for info, quickly – and nothing induces trust like relatability. This will also have implications for vanity metrics like "*time on page*". If we are good, a user will look for the information, and engage. If we are great people, get the information, and leave. On to make the world a better place.

***As for how we apply the TL;DR, we simply write TL:DR under the two-tier title and provide the summarized version. No need for us to come up with a new Stellar term for this.***

# *Have a sense of place.*

*Being human centric makes our expression complicit in the space our reader exists in. Is our human reading us in a newspaper? Then the text knows it's in a newspaper. It knows it's at an event. Or on mobile. It knows other information is fighting for this specific moment of attention.*

***A text like "Real World Meet Blockchain", at a blockchain event, becomes "Blockchain, meet the Real World."***

An Article in a newspaper, knows that it has a headline, knows how to blend in and how to stand out, knows what other news is in the newspaper, and reacts to all of that.

# 12 Naming Convention

# Naming Convention

*When we talk about a product, program, technology, or tool that lives adjacent to the Stellar Ecosystem, we use Stellar as the main Brand name and the product, program, technology, or tool as the Surname.*

***Applied** Stellar Quest, Stellar Core, Stellar Anchors.*

*This does NOT apply to third party assets developed on the Stellar network.*

***Stellar Development Foundation***
*Anything related to the actual foundation*

***Stellar network***
*The actual blockchain network*

***Stellar***
*Refers to the collective term for our general universe (all things related to the Stellar network, SDF, technology and tooling, companies in our ecosystem etc) — BROADER Stellar Ecosystem*

When we would use

# Stellar Development Foundation

*Anything related to the actual foundation*

***Recruiting***
*Join SDF!*

***Our products***
*SDF released a new version of the SDP*

***Announcements***
*SDF provides the economic and technical support to partners to integrate with or build on the Stellar network. Need to attribute support to SDF.*

***Speaking Engagements***
*submit Stellar Development Foundation*

When we would use

# Stellar Network

*The actual blockchain network*

*We will ALWAYS add specificity when talking about the actual network.*

***Options include:***

- ➔ *Stellar network*
- ➔ *Stellar blockchain*
- ➔ *Stellar blockchain network*
- ➔ *Stellar Core*
- ➔ *Stellar Horizon (which we do NOT do today)*

When we would use

# Stellar

*Refers to the collective term for our general universe (all things related to the Stellar network, SDF, technology and tooling, companies in our ecosystem etc) — BROADER Stellar Ecosystem*

- ➔ **Badges** *should be 'Stellar (SDF)'*
- ➔ **Booths** *(Stellar branding – the Stellar booth)*
- ➔ **Sponsorship** *– use Stellar, but maintain SDF as the contractual counterparty*

# Additional Use Guidelines

## *Stellar is infrastructure, the Stellar Development Foundation is an entity*

**Do**: use "Stellar" to refer to the protocol, the tech that implements the protocol, and/or the network: "Built on Stellar." Be specific when you need to: the Stellar Protocol, Stellar Core, the Stellar network.

**Don't**: use "Stellar" to refer to the Stellar Development Foundation. Instead, say "Stellar Development Foundation," "SDF," or "the Foundation."

**Don't**: use Stellar as a possessive ("Stellar's Anchor Network" vs. "Stellar Anchor Network") or don't use the phrase "our" or "its" to refer to Stellar.

- ➔ ***"Stellar's mission..."*** *is incorrect because a mission requires intention, which infrastructure doesn't have. Say* ***"Stellar was designed to..."*** *or* ***"SDF's mission..."***
- ➔ ***"Stellar"*** *is never second person so don't use second-person possessives to refer to Stellar.*
- ➔ *Stellar Development Foundation can be second person, and when you use the second person plural, you should assume that the antecedent is SDF (unless otherwise specified).*
- ➔ *Things that are about Stellar can use Stellar as the descriptor*
  - ◆ *Stellar announcements*
  - ◆ *Stellar events*
  - ◆ *The exception here relates to partnerships/collaborations, which are with SDF*
- ➔ *Events/Sponsorship*
  - ◆ *Badges should be 'Stellar (SDF)'*
  - ◆ *Booths (Stellar branding – the Stellar booth)*
  - ◆ *Sponsorship - use Stellar UNLESS the public-facing wording is 'Sponsored by' (or if using Stellar Development Foundation simply isn't practical), but maintain SDF as the contractual counterparty*

# 13

# Enterprise/Policy Audience

# Fonts

**Lora** is used for headlines instead of Schabo.

Lora

**Inter** is used for pre headings and body copy, or other detailed uses only.

Inter

***Download*** Fonts

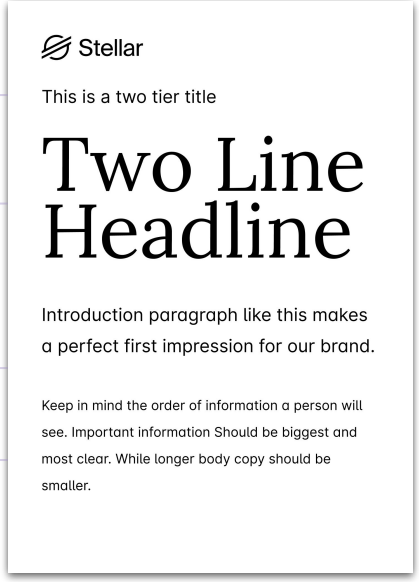
# How its used

*We start with a title that explains in full "technical correctness" what we are here for in Inter.*

***Lora** is used for headlines and is set title case, Here we use more reserved and solution centric language.*

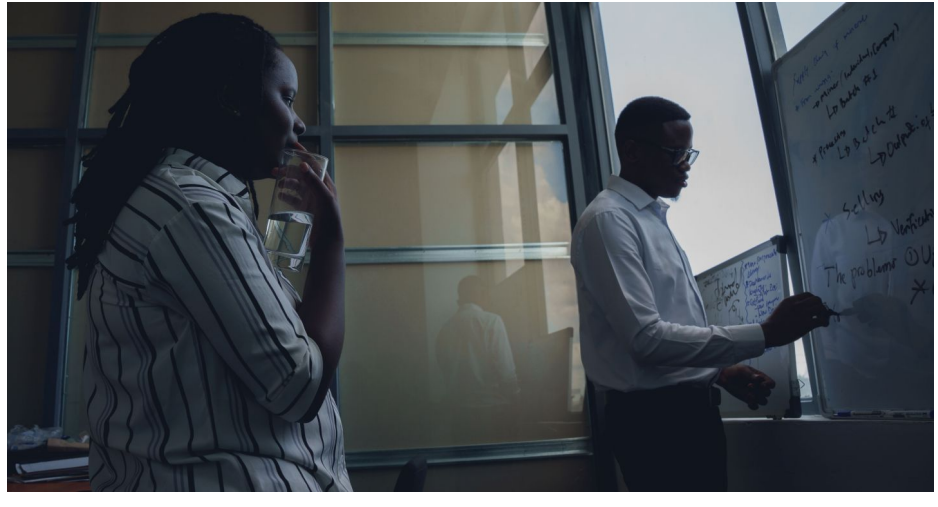
***Inter** is used for longer headlines and sub-heads.*

***Inter** is used for captions, body copy, or other detailed uses.*



# Photography

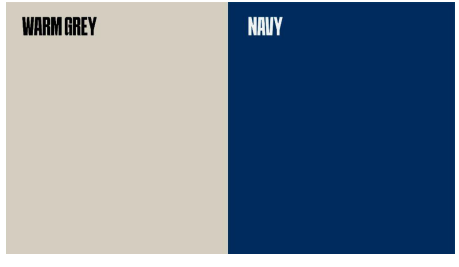
We should always use photos
to show our Builders in more corporate settings.
Photos should show Finance and have a reserved
tone for our corporate side.



***Download*** Illustrations

# Texture and Color

- The use of color and texture add in an extra layer of meaning to the look and feel to the webpage. Tearing away the layers to get to the “***real***”.
- Instead of using our generous gold against white or black, which creates a lot of contrast, we can opt for a more reserved tone with the ivory and navy blue.
- Yellow can still be used as an accent to highlight specific areas or CTAs.



Stellar

# Sound Branding

Oct 2025

# Sonic branding *background*

*The brand has come alive in both its tonal and visual aspects. Stellar has become more human-centric, finding a balance between the 'how' and the 'why,' making it more approachable for tech-curious individuals, educators, aid workers, and policy makers, while still maintaining our core, hardcore tech message. Now, we're doubling down on our brand by creating a recognizable, unique, and consistent sound identity—one that resonates even when our audience looks away.*

This sound brand aligns with the overall brand values and has been meticulously crafted using a neuroscientific approach to achieve high levels of recognizability and brand awareness. Its effectiveness was measured in a study conducted by **Neurensics** at the VU University Medical Center in Amsterdam, where a panel of over 50 IT specialists and Stellar co-workers underwent deep MRI analysis, examining every aspect of our sound brand and correlating brain responses to key brand values.

By incorporating a consistent sound into our brand expressions moving forward, we will significantly enhance brand awareness and reinforce brand consistency across all touchpoints. We've developed a comprehensive toolkit to meet many of Stellar's typical needs—intros and outros for videos or animations, background music, event soundtracks, loops, and more. Each asset strikes a balance between technology and humanity: some sound more tech-driven and synthesized, while others feel more organic and human-made.

*Feel free to play, experiment, and mix and match these elements to create a cohesive and memorable brand experience.*

# 1.0 Sonic Ethos

# Sound Brand Ethos

*Our sound brand is science-based, yet leaves room for artistic interpretation. It embraces sounds native to every continent, blending them with high-tech synthesized instruments.*

We incorporate the human element by adding vocal sounds and instruments that use the human voice as a base, the instrumentalist doesn't play the instrument, but speaks to it.

We intentionally mix conventions that anchor sounds in specific cultures or geographies, giving it global appeal.

*Our sound is global, and mixes textures and convention. We leverage the human voice.*

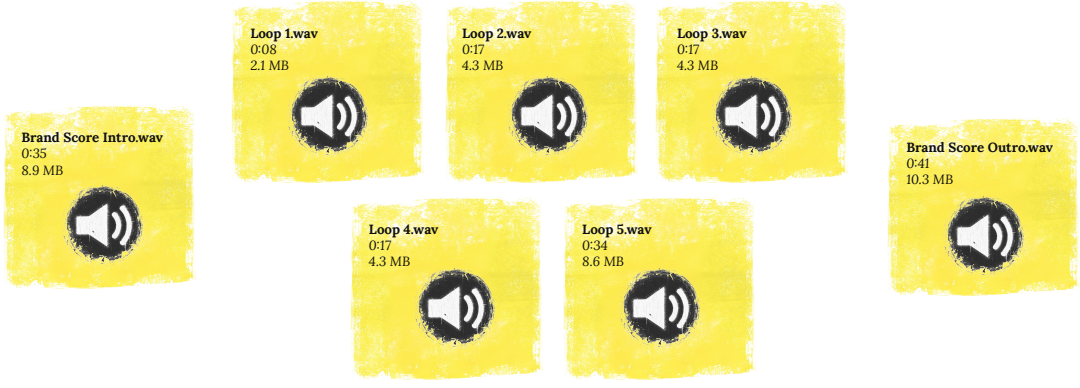
# 1.4 Intro, Outro, & Loops

# Loops

*We have crafted 5 loops in different moods and energy levels that you may use in your projects. They loop perfectly and can be mixed and matched for endless creation.*

They also align perfectly with the Intro and Outro so you can create your own custom brand score, to fit any type of project at any length.

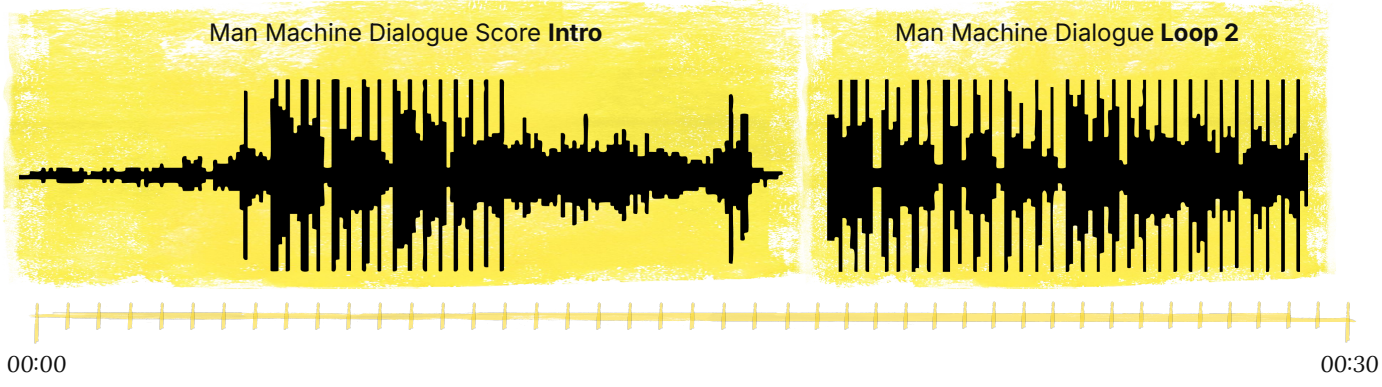
**Download** Loops



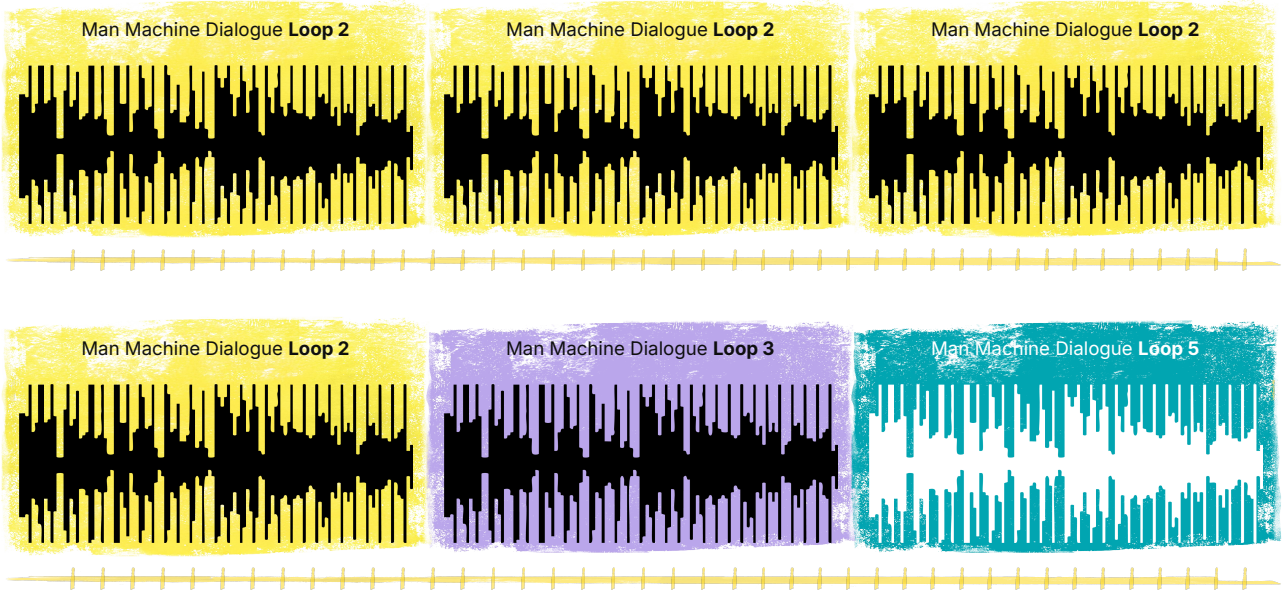
*Scale and Root note: E Major BPM:113 :*

You can grab the intro, grab any loop and put it behind.

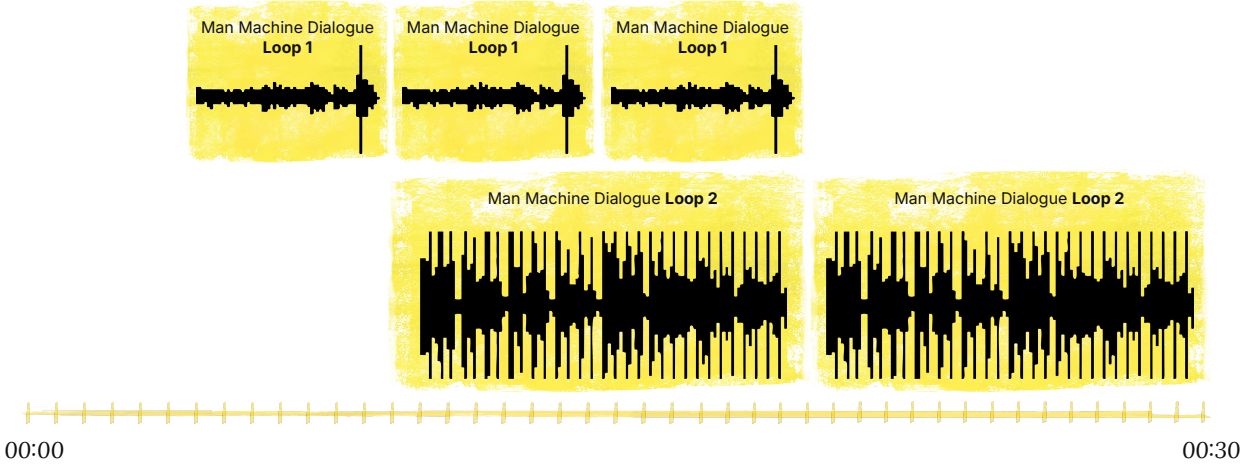
***Timeline***



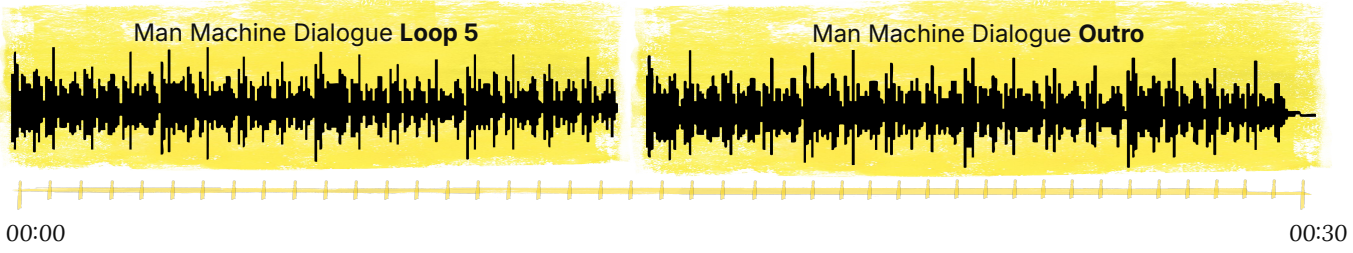
Any of the loops can be looped to itself or to any other loop.



We can also stack our sounds to create even more unique blends. This can help you reach interesting musical climaxes, or blend transitions. Mixing these sounds will keep our sound brand from becoming repetitive and predictable.



To finalize the music you can mix it with any loop with Outro



# 1.5 Event Soundscape

# Event Soundscape

*These longer sound pieces can be used in physical events as backdrop. The music has different levels of energy depending on what kind of event is happening in its foreground.*
